

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

JUNE 4.

Mr. CHARLES MORRIS in the Chair.

Fourteen persons present.

A paper entitled "New Japanese Marine and Fresh-water Mollusca," by Henry A. Pilsbry, was presented for publication.

Occurrence of Hyla andersonii at Clementon, N. J.—MR. WITMER STONE exhibited a specimen of *Hyla andersonii* obtained at Clementon, N. J., May 12, 1901, by Mr. Henry L. Viereck, and presented by him to the Academy.

The species was heretofore known only from five examples—the type secured at Anderson, S. C.; one obtained by Dr. Joseph Leidy, at Jackson, N. J., July 1860; one from May's Landing, N. J., J. E. Peters, June 1, 1888, and two from Pleasant Mills, June 17, 1889, Dr. J. Percy Moore.

Mr. Stone stated that, though probably of restricted distribution, the species would no doubt prove more abundant if specially sought for, the comparative remoteness of the New Jersey barrens, where most of the specimens were found, and the retiring habits of the animal both tending to make its detection difficult.

A few months since he had heard some tree frogs in a swamp near Medford, N. J., whose call was different from that of any other species with which he was acquainted, and he was inclined to attribute it to the present form; diligent search, however, failed to discover the animals.

JUNE 11.

Mr. ARTHUR ERWIN BROWN, Vice-President, in the Chair.

Fifteen persons present.

Papers under the following titles were presented for publication:
"Zygeupolia litoralis, a New Heteronemertean," by Caroline Burling Thompson.

“ New Mollusca from Japan and the Loo Choo Islands,” by Henry A. Pilsbry.

“ A Peculiar Condition of *Ædogonium*,” by Ida A. Keller.

“ Crystalline and Crystalloidal Substances and their Relation to Plant Structure,” by Henry Kraemer.

JUNE 18.

Mr. ARTHUR ERWIN BROWN, Vice-President, in the Chair.

Ten persons present.

Papers under the following titles were presented for publication :

“ The Acrididæ, Tettigonidæ and Gryllidæ Collected by Dr. A. Donaldson Smith in Northeast Africa,” by James A. G. Rehn.

JUNE 25.

Mr. ARTHUR ERWIN BROWN, Vice-President, in the Chair.

Nine persons present.

A paper entitled “ The Nasal Passages of the Florida Alligator,” by A. M. Reese, was presented for publication.

Henry Kraemer was elected a member.

The following were ordered to be printed :
